These portfolio statistics exclude the £500m UK Sovereign Sukuk issue which was launched on 25 March 2021.

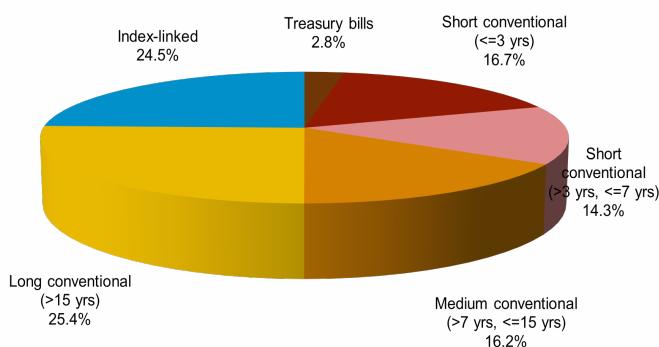

1. Based on nominal values, including inflation uplift and T-bills for debt management purposes. The difference between the debt portfolio average maturity statistic included in the table above and the one presented at the top of the next page (calculated off market values) is driven by the divergence of gilts' prices from their par values.

2. The "net values" category excludes gilts held by the DMO.

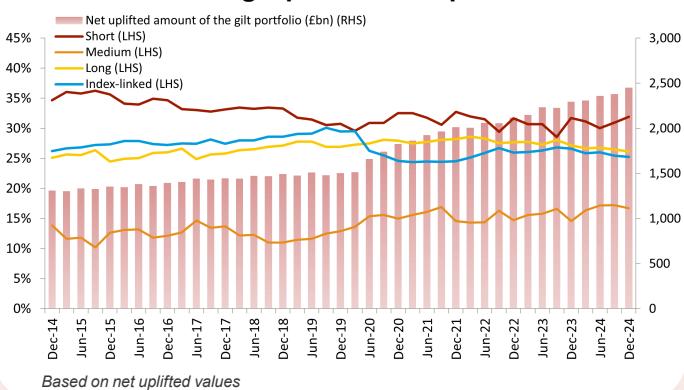

3. For debt management purposes. Treasury bills issued for cash management purposes are excluded from the Quarterly Review statistics from June 2016 onwards. More information on T-bill data revisions as well as the complete quarterly debt portfolio history can be found via the 'Data' section of the DMO's website under the 'Gilt Market' link: <https://dmo.gov.uk/data/gilt-market/>

4. Data covering conventional gilts for December 2024 and September 2024 in the table above and the first table on page 2 include green gilt sales of £42.7bn and £41.6bn respectively. The respective data in the table above for June 2024 and March 2024 include gilt green gilt sales of £39.5bn and £35.9bn.

Gilt Market

Turnover

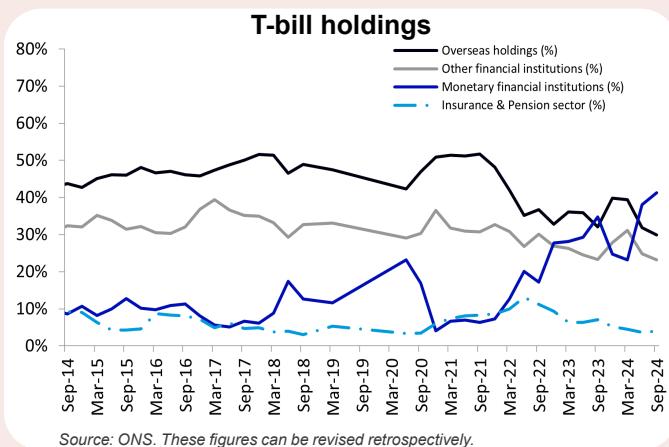

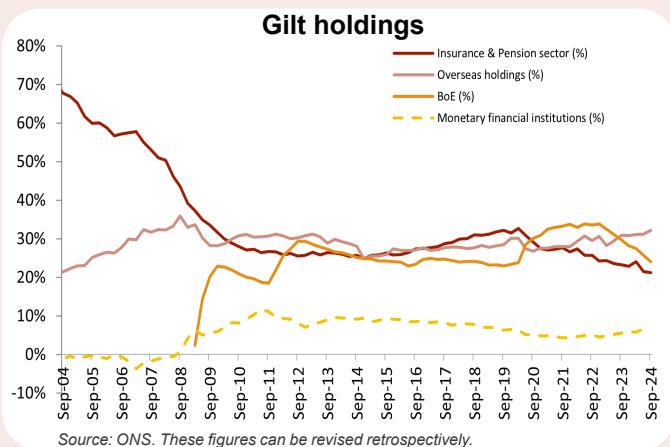

Turnover figures are based on market values and appear as reported to the DMO by Gilt-edged Market Makers (GEMMs). Professional turnover is defined as turnover with counterparties who are InterDealer Brokers (IDBs), Agency Brokers, other GEMMs, DMO or Bank of England. Professional turnover volumes do not account for the effect of possible double counting due to trading with IDBs.

Net issuance in the chart above is defined as gross issuance net of gilt redemptions.

Future gilt redemptions (£bn)

The redemption totals for index-linked gilts in this chart do not reflect the full value of inflation uplift. They are calculated in a way consistent with the formulation of the Government's financing requirement; i.e. that part of the accrued inflation uplift on any redeeming gilts that represents the return to investors is included in the CGNCR in that redemption year, and the remainder is included in the redemption total for the year in which the relevant gilt redeems. More specifically, in cases where an index-linked gilt is re-opened (following an initial issue) any accrued uplift on that gilt that is accrued before the re-opening occurs will be treated as principal (and therefore part of the redemption total). However, any accrued inflation uplift that occurs after the re-opening of the gilt will be treated as a return to the investor and thus will be included within the CGNCR for the year in which the gilt matures.

The DMO calculates the Index Ratio values on the following basis:

- (a) 3-month lag index-linked gilts: business date following the calculation date (i.e. 2 January 2025 in this case);
- (b) 8-month lag index-linked gilts (these values are indicative only, and are rounded here for display purposes): calculation date (i.e. 31 December 2024 in this case).
