These portfolio statistics exclude the £500m UK Sovereign Sukuk issue which was launched on 25 March 2021.

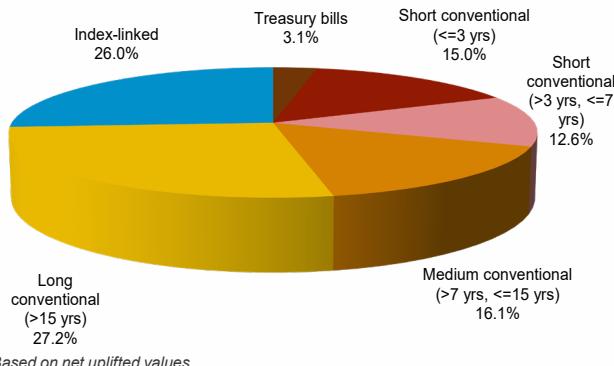

1. Based on nominal values, including inflation uplift and T-bills for debt management purposes. The difference between the debt portfolio average maturity statistic included in the table above and the one presented at the table at the top of the next page (calculated off market values) is driven by the divergence of gilts' prices from their par values.

2. The "net values" category excludes gilts held by the DMO.

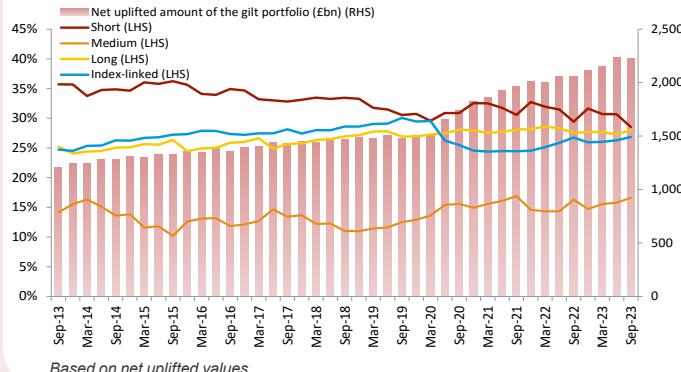

3. For debt management purposes. Treasury bills issued for cash management purposes are excluded from the Quarterly Review statistics from June 2016 onwards. More information on T-bill data revisions as well as the complete quarterly debt portfolio history can be found via the 'Data' section of the DMO's website under the 'Gilt Market' link: <https://dmo.gov.uk/data/gilt-market/>

4. Data covering conventional gilts for September 2023 and June 2023 in the table above and the first table on page 2 include green gilt sales of £31.4bn and £28.2bn respectively. The respective data in the table above for March 2023 and December 2022 include gilt green gilt sales of £26.0bn and £22.5bn.

## Gilt Market

## Turnover

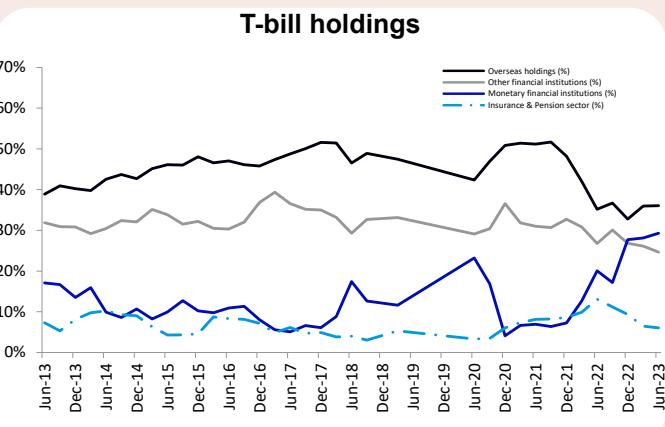

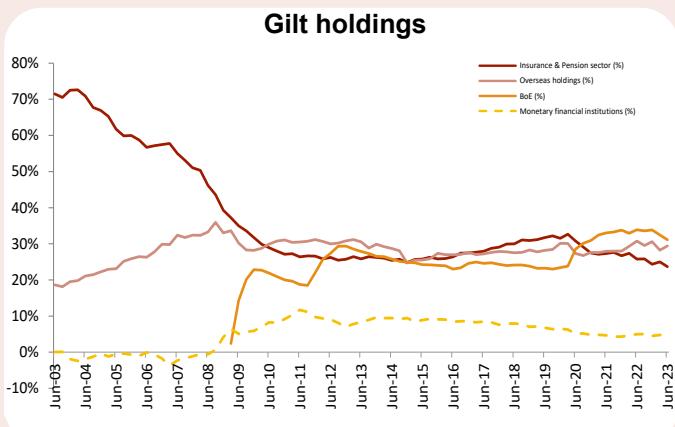

Turnover figures are based on market values and appear as reported to the DMO by Gilt-edged Market Makers (GEMMs). Professional turnover is defined as turnover with counterparties who are InterDealer Brokers (IDBs), other GEMMs, DMO or Bank of England. Professional turnover volumes do not account for the effect of possible double counting due to trading with IDBs.

### Gilt market flows (£bn)

### Annual financing requirements (£bn)

### Future gilt redemptions (£bn)

The redemption totals for index-linked gilts in this chart do not reflect the full value of inflation uplift. They are calculated in a way consistent with the formulation of the Government's financing requirement; i.e. that part of the accrued inflation uplift on any redeeming gilts that represents the return to investors is included in the CGNCR in that redemption year, and the remainder is included in the redemption total for the year in which the relevant gilt redeems. More specifically, in cases where an index-linked gilt is re-opened (following an initial issue) any accrued uplift on that gilt that is accrued before the re-opening occurs will be treated as principal (and therefore part of the redemption total). However, any accrued inflation uplift that occurs after the re-opening of the gilt will be treated as a return to the investor and thus will be included within the CGNCR for the year in which the gilt matures.
